ADIPOLYSIS ASSISTED BY FAT FREEZING.

HOW DOES THE PROCEDURE WORK?

The CoolTech® procedure reduces fat tissue using a controlled cooling system. It is a non-invasive procedure, safe and effective.

The handpiece vacuums the chosen area, creating a vacuum effect that reduces blood flow momentarily cooling the fat tissue and thus causing cell death.

The fat cells in the treated area are gradually eliminated through the normal metabolism process by lymphatic system.

WHEN WILL RESULTS BE VISIBLE?

With only one procedure the results will be visible after 15 days and optimal results after the first 12 weeks.

HOW MANY SESSIONS WILL I NEED?

1-3 sessions in the same area every 6-8 weeks.

HOW LONG DOES THE TREATMENT LAST?

Is it recommended a 70 minutes treatment for each application.

CoolTech® treatment:

WHAT AREAS CAN BE TREATED?

- > Abdomen
- > Love handles
- > Inner & outer thighs
- > Back rolls
- > Inner & outer knees
- > Down buttocks

IS THERE ANY RECOVERY PROCESS?

The procedure allows the patients to immediately resume their lives. The treatment has no downtime as the procedure is non-invasive.

WHAT ARE THE BENEFITS OF THE TREATMENT?

- > **Effective** and **safe** therapy.
- > **Non-invasive** and **pain free**.
- > Visible results after just one procedure.
- > Final reduction of adipose tissue, not temporary.
- > No downtime or drugs required after treatment.
- > No exercise and diet required after treatment.
